# Observe Green-down

Date \_\_\_\_\_

Name \_\_\_\_\_

Type of Tree \_\_\_\_\_

## Instructions:

1. Go outside and check your adopted 4 leaves.
2. What color is each leaf? Match the color on the GLOBE leaf color chart to each leaf.
3. Write the color code in the leaf to the right.
4. If the leaf has more than one color, write the color that takes up most of the leaf.
5. If the leaf has fallen, write "fallen" in the leaf or put an X on it.
6. You can color the leaf in like a scientist with a crayon that matches. Be sure to write the color code in the leaf.

# Each observation tells a story about the past

We cannot change the past.

But we can change the future.

# Scenarios Storytelling

What trends were in the data?

If green down season started later and fall is warmer, what will the climate future look like if we do nothing?

## Stories of Possible Futures

We have thought about some of the things that could affect leaf green down healthy into the future. Now, let's think of two different stories of what you the left, draw or fast-write a story if we do not do any of the ideas we came we do use the ideas.

Title: bad days!

The do-nothing story

Imagine your  
tree again.

# We don't have to accept this do-nothing future!

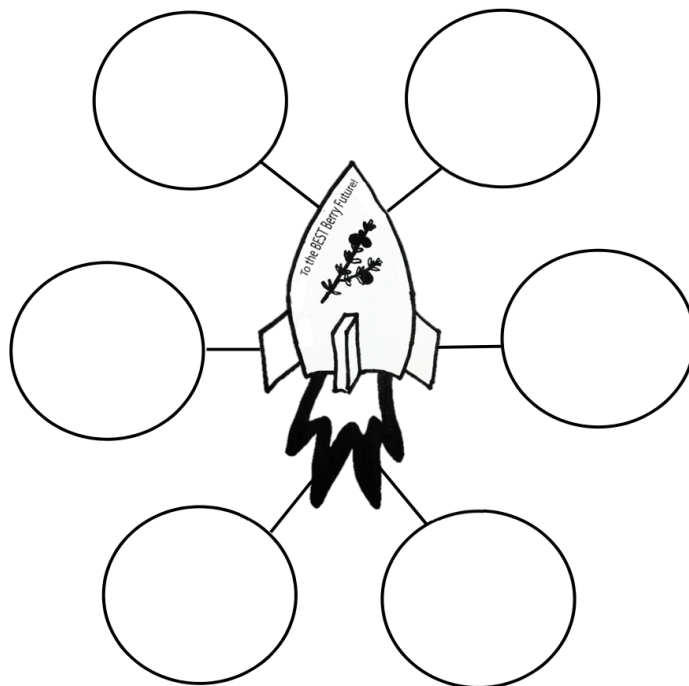

1. Brainstorm some ways together that you and your community could make a better climate future.
2. Record some ideas.
3. Discuss how your story would change if you took one or more of these actions.

## How do we get to the best berry future?

Imagine you have graduated from high school. What are the sorts of things you or other people could be doing to try to make sure berries are around and in good condition for the future? New technology? New berry crops? New data or information? New laws?

Make a thinking map with your ideas. Write one idea in each bubble.

Rewrite the future where you have taken one or more of these actions.

# FUTURE

Turning  
GLOBE Data  
into Climate  
Action for  
the Future

into Climate  
Action for  
the Future

Alaska delegation to the Pacific and NW Regional Student Research Symposium  
NASA Jet Propulsion Laboratory, Pasadena, California, May 2024

**Through GLOBE observing  
and by imagining the future,**

---

**we change ourselves.**

# Key Findings

Storytelling improved science and stewardship self efficacy.

# Key Findings - Youth Work

Who was the agent of change in the youth scenario stories?

Rural youth were more likely to picture themselves as agents of change than urban. No difference across ages

# Key Findings - Retention

- 92% of youth groups in storytelling group continued for a second year
- 70% continued for 3 or 4 years and joined other programs

# Key Findings - Educator Interviews

## Value to youth -

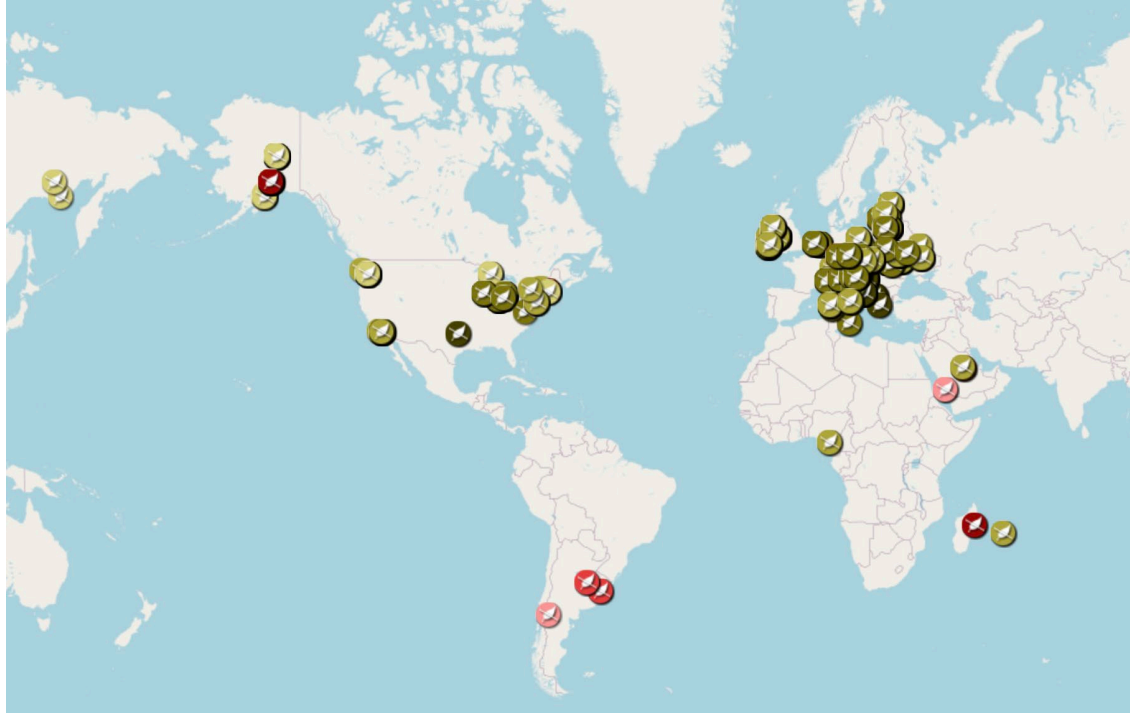

1. Sense of being a part of something bigger
2. Connected CitSci to culture and community
3. Chance for youth to use and apply data
4. Positive thinking about the future

## Value to practice -

1. Physical presence of a scientist and mentor
2. Tangible results, hands-on and made climate change relatable
3. Connected with youth group learning priorities -informal and formal learning
4. Interdisciplinary- easy to connect with many aspects of ongoing learning

# Through GLOBE observing we change the world

2023-24 GLOBE Year of Climate and Carbon Green Down leaf phenology observations

**GLOBE observations tell  
the story of our past,**

---

**and can help create the  
story of our future.**
