What I like about GLOBE

I liked when the GLOBE teachers visited our classroom. We went outside and recorded observations of clouds and the air temperature. We used infrared thermometers to measure the surface temperature of the grass, the sidewalk, and some dirt. We also looked at maps from NASA and we got to learn about volcanos and aerosols from NASA scientists on a Zoom meeting.

I like how caring the teachers are and how they teach us. Also they like what we say and I appreciate that.

Why I like this about GLOBE

I like GLOBE because I think they would make our dream come true and do anything that maybe we would like.

We did some different things with GLOBE and we got to meet people from NASA. That makes me think there are a lot of other things we could do with GLOBE and NASA to learn about the climate and the environment.

What I would like to do with GLOBE and NASA in the future.

I would like to learn about wild animals like bears. I think that means I would look at things like trees and water with GLOBE. I wonder if bears ever used to be vegetarians or if they always ate meat. I think I could learn more about the environment with GLOBE and that would help me to learn more about animals like bears. I also would like to research about other planets and universes that look like ours.
